

Why FLX

1. The Revolabs FLX™ is available as both a Wireless POTS/Analog or VOIP (INDUSTRY FIRST) product.
2. The Revolabs FLX is designed to adapt to Any size conference room, or conference room configuration.
3. The FLX is available in multiple configurations with THREE microphone options, Omni directional, Direction, and Wearable microphones.
4. No wires on the meeting room table. All of the components are wireless (speaker, mics, & dialer) so the phone easily adapts to ANY conference room instead of the room & participants needing to adapt to the phone.
5. The FLX base supports USB connectivity allowing the unit to connect to a computer for use with Webex & Skype type applications.
6. Bluetooth connectivity is integrated into the Revolabs FLX which lets you connect the speaker and microphones to your Bluetooth enabled cell phone or computer.
7. The FLX base allows you to use the unit as the audio interface with your video conferencing unit, The system is compatible with all major brands of video conferencing systems
8. The Revolabs FLX dialer is used to set up a conference call, or works like a handset telephone for private calls.
9. Revolabs FLX uses DECT 1.9GHz minimizing interference with other technology in your environment and does not steal bandwidth from your WiFi network.
10. The FLX batteries support 8 hours of talk time, recharge in 2 hours, and are field replaceable.
