SIP & H.323 Protocol SupportOur VoIP FCT's can compliment any SIP or H.323 based IP PBX and canalso be used as a substitute to any SIP based IP PBX by adding the SIPProxy Server.Sophisticated RoutingThanks to the sophisticated Least Cost Routing (LCR) in both versionsof our VoIP FCT’s, all calls are always routed in the cheapest possibleway. When using the STUN services, the FCT can be connected to any LANbehind the router which has NAT and a dynamic IP address. With the helpof voice prompts and the efficient AutoCLIP Router, the unit alwaysroutes GSM incoming calls to the correct IP Phone.Send a TextLAN and web users can take advantage of 2N’s embedded SMS Server tosend and receive text messages, with this Server you can also see the detailed statistics report to review your message and obtain where andexactly when the text was sent or received.Mobility ExtensionWith the Mobility Extension feature, you can twin your mobile phone to your desk phone and you then only need to manage one mailbox and oneaddress book! What’s more, when answering your mobile handset, you canuse all of the host PBX features such as hold and transfer. UsingMobility Extension on our VoIP Fixed Cellular Terminals means you canreduce your call costs dramatically when communicating with your ownfield-based staff.
