3CX   Traditional telephony systems in organisations tend to be complex, expensive and inflexible requiring proprietary hardware, dedicated wiring and specialist support to install, configure and reconfigure whenever changes are required - this no longer has to be the case...   BeroNet

Get ready to buy a new berofix card? We designed berofix to simplify the things you do every day, work the way you want, and make some new things possible. Want examples? Here are some good reasons to make the move to berofix.

• berofix is modular and can carry up to two Lineinterfaces, therefore it is easy to upgrade berofix by adding a second LineInterface. Due to the modular concept berofix can be used in hybrid scenarios. You can mix BRI / PRI and in the future GSM and analog LineInterfaces on one card.
• berofix supports Linux & Windows operating systems and more. Berofix can be used as an internal card or in Virtual enviroments.
• berofix is SIP Server independent. You can use berofix with 3CX Asterisk or any other SIP Based System - berofix supports all versions of asterisk.
• berofix supports on Board DSP Voiceproccesing and features such as the G.168 compliant Echocanceler, Codec translation (e.g G.729 G.723) and more.
• berofix support built-in T.38 stack for faxing over IP which provides you with high quality features such as low CPU consumption on the Hostsystem providing great value.
• berofix is provides full TDM to TDM hardware Bridging between LineInterfaces on one card and and in future will support same between several cards over the PCM Bus.
• berofix is available as internal PCI / PCIe cards or as an external Box. Both versions operate identically.
• berofix is easy to update by simply upgrading new firmware.
• berofix's Cost : Performance ratio is very attractive in comparison to other media gateways or PCI/PCIe card vendors.
