AVM FRITZ!Box 3490

The AVM FRITZ!Box 3490 is the perfect platform for pure data transfer. It's perfect for all DSL connections, supports vectoring, and delivers ultra fast Internet. Applications such as IPTV, video on demand, and media streaming within the home network benefit from two high-speed wireless networks that can be used at the same time. The FRITZ!Box 3490 operates in both the 5 GHz (wireless AC) frequency band with speeds of up to 1,300 Mbit/s and the 2.4 GHz frequency band with speeds of up to 450 Mbit/s. The ability to use both bands at the same time offers maximum flexibility for smartphones, tablets and notebooks within the home network. The FRITZ!Box 3490 also demonstrates its versatility when it comes to Internet connectivity: as vectoring is fully supported, the device is already compatible with VDSL connections offering up to 100 Mbit/s. Ideal for networked applications By virtue of its two USB 3.0 ports and expanded NAS functionality with media server and built-in online storage, the FRITZ!Box 3490 opens up new networking possibilities. Four gigabit Ethernet ports also provide hardware such as computers and network storage devices with high-speed access to the home network. The FRITZ!Box 3490 comes with the latest version of FRITZ!OS complete with tried-and-tested features such as wireless hotspot capability, parental control software, and VPN support.
