Askozia for Pika WARP

Install AskoziaPBX on your PIKA Warp. All models including VoIP-only, ISDN and Analog supported. One-time purchase, all updates in the 2.1 series delivered for free. Handbook included. Unzip file before following the installation instructions. SD card for installation required and NOT included.

AskoziaPBX is a complete embedded telephone system firmware. It is incredibly easy to use, runs on a multitude of hardware offerings and speaks ISDN, Analog and VoIP. Full Featured Auto-Provisioning, Voicemail via e-mail, Fax support, conferencing, transfers, call parking, music-on-hold, multilingual configuration interface, multilingual audio prompts, regional tone settings... it's all there. See our complete feature list.

Easy to Install

Simply plug and play! No dealing with the console, no trip to your local electronic shop for the right installation media. Just plug in the SD card and boot your telephone system with it. It couldn't be simpler. Proper Docs Included If you're having trouble with a specific integration or are just looking for more contextual information about the configuration, this handbook will help you on your way. With over 80 pages of how-to information, all of the functionality has been detailed. All firmware images of the Askozia 2.1 series are delivered with the English version of the handbook.

**Price: £49.00**
