

# Gigaset T500 SMB IP PBX

Product Name: Gigaset T500 SMB IP PBX

Manufacturer: Gigaset

Model Number: T500

Please Note: The Gigaset T500 has been discontinued. For an alternative, we highly recommend the Gigaset T640.

## Gigaset T500 PRO SMB IP PBX

The T500 PRO is the enterprise-grade telephone system built for small and medium businesses. Its flexibility lets you decide what type of infrastructure is best: telephony over classic fixed-line, ISDN, VoIP or all three. Embedded functions allow you to enjoy the synergies and savings potential of a converged network, or allow you keep your existing infrastructure resulting in minimal installation expense. The T500 PRO supports a complete feature set such as voicemail, conferencing, fax-to-desk and desk-to-fax, IVR, ACD and CTI, and seamlessly integrates into a Unified Communications environment. This easy to set up and administrate PBX is the perfect SMB communication solution made in Germany.

## Expandability

The T500 PRO connects distributed locations worldwide easily and quickly via its wide palette of IP networking options. After two telephone systems are connected via IP, the T500 PRO manages the certificate and information exchange of both systems. The administrator can then complete the process with a few mouse clicks for the uniform phone number plan, or alternatively continue these systems independently. Real time synchronization After a new location or phone is added, the connected T500 PRO PBX synchronizes in real time. Presence management is built in, utilizing busy light indicators at the telephone or soft phone to inform of a colleague's location and status. Optimal customer service Location-based user groups with flexible overflow functions enable distributed switchboards, sales and marketing hotlines or support teams to become consolidated hotlines (call groups). No more busy signals or long queues – essential for top quality service. Easy Setup and Administration The built-in setup wizards enable "zero-touch" deployment of telephones so that newly added phones are up and running in minutes. The intuitive web-based interface, drag & drop functions, and support of standard protocols make configuration of the telephone system extremely easy. Even a layman can activate functions such as call detour quickly and simply. Includes server license and 10 user licenses
