

Snom M3 DECT Repeater

Product Name: Snom M3 DECT Repeater

Manufacturer: Snom

Model Number: SNOMREPEATER

snom M3 DECT Repeater

The snom M3 DECT repeater can be deployed when there is a need to extend the range of the snom m3 dect IP phone, or the desire arises to increase limited coverage or improve reception in far away areas. It is designed for compliance with the DECT standard. It is intended for a use in residential, business and public DECT applications based on the GAP profile. The M3 DECT Repeater is an ideal addition for the snom m3 VoIP phone. The snom M3 DECT Repeater has two internal antennas and can be used to double the effective range of a DECT Base Station. The snom DECT Repeater also ensures the seamless intercell handover from the base station area to the repeater area and vice versa. It is possible to register upto 6 repeaters to a single base station. Furthermore the snom DECT Repeater uses a new, automatic registration method. With this new method, the repeater automatically seeks and acquires the DECT/GAP base station that emits the most powerful signal. For the end user this means that the repeater installation has been simplified to Plug-and-Play.
