Product Name: Snom MeetingPoint Conference Phone
Manufacturer: Snom
Model Number: MEETINGPOINT

snom MeetingPoint Conference Phone
The snom MeetingPoint Conference Phone is the perfect solution for anybody who makes frequent cross-location consultations. The snom MeetingPoint is the only SIP conference phone that allows you to use Microsoft Office Communication Server 2007 R2 and Standard SIP accounts in one conference phone inparallel.   It is already compatible to Microsoft Office Communications Server 2007 R2 with the snom OCS edition in parallel use to any SIP based IP pbx.

With the new snom MeetingPoint you are able to allow for a total of external four parties to participate at the phone conference from different locations all over the world. This helps to control the time- and travel budget of every company!

The snom MeetingPoint is perfectly qualified for use in middle to large conference rooms. As result of the reliable suppression of disturbing background noise and its excellent sound quality you can hold your telephone conferences in large groups of up to 10 persons without affecting the intelligibility of the call. Three speakers, equipped with full duplex broadband audio (7 kHz, codec “G.722”) provide balanced and full sound, which snom customers also know from the snom klarVoice handset. The integrated special microphones ensure that your interlocutors feel as if you are sitting in the neighboring office - and not on the other side of the world!

Additionally the snom MeetingPoint has all the advantages from a snom VoIP phone: highest security combined with several features like the snom Flexor CTI or the snom OCS edition. 12 different SIP identities give you the flexibility you need.

Additionally, the new snom 820 WiFi enables you to install the phone in any surrounding you are. Whatever you prefer, the snom 820 is prepared for any option: Power over plug, Power over Ethernet (PoE) or WiFi.

snom MeetingPoint Conference Phone Technical Specifications
