

Snom Wireless Headset Adapter

Product Name: Snom Wireless Headset Adapter

Manufacturer: Snom

Model Number: SNOM_WIFI

Snom Wireless Headset Adapter / Bridge

Wireless headsets are increasingly popular in professional business environments such as call centres - where the extra freedom can make an enormous difference to performing everyday tasks.

The snom Headset Adapter, for the control of wireless headsets is the bridge between a professional VoIP phone system and professional wireless headsets.

The snom Headset Adapter has an EHS interface which conforms to vendor specific standards as well as the DHSG standard (which enables the electronic reception of calls on the headset itself). When the telephone receives a call, the original ringing tone is signalled in the headset and the call can be answered and terminated on the headset.

The snom Headset Adapter is designed specifically for the snom 300, 320, 360, and 370 voIP phones.

Main Features /Specification

- DHSG Standard
