

Product Name: VXI Omnicord-V

Manufacturer: VXI Corporation

Model Number: 203365

VXI Omnicord

The one-piece solution that replaces both the audio booster and adapter cable, OmniCord simplifies headset setup for virtually all telephone systems. Just plug the standard RJ9 connector into your phone's headset port and connect the Quick Disconnect (QD) to your headset. Set the three-position compatibility switch and the microphone volume, and you're in business.

Adapter and audio booster in one.

Because most telephone brands are wired differently, connecting a headset to your phone is not always as simple as you'd like. And if you also need to boost the volume of your headset mic? You need another cord, another connection—more clutter on your already-crowded desk. OmniCord is the one-piece solution. A single cord that replaces both the audio booster and adapter cable, OmniCord simplifies setup for virtually all telephone systems.

VXI Omnicord Key Features

- Audio booster and adapter in one cord.
- Three-position compatibility switch works with most phone types.
- Eight-position microphone gain adjustment provides transmit amplification when needed.
- Three versions are available (V, G and P) for use with major headset brands.
- One-year warranty.

VXI Omnicord Variations

- OmniCord-V. For use with VXi headsets.
- OmniCord-G. For use with GN/Jabra headsets.
- OmniCord-P. For use with Plantronics headsets.
