Manufacturer: Xorcom

Model Number: XV0500

Please Note: This Xorcom XV0500 has been discontinued. For an alternative, we recommend the IP Video Conferencing range of products.

Xorcom Multi-point Video Conferencing Appliance - SIP only XV0500

The Xorcom XV0500 is a stand-alone video conferencing appliance compatible with any Asterisk-based IP-PBX. The Benefits Video Conferencing Brings to Enterprises

Due to the enormous growth in smart phone use and the widespread adoption of multimedia applications, video conferencing is quickly becoming the natural choice for communications in the larger enterprises. The main benefits of this type of communication that immediately come to mind include:

- Cost-effective meetings — cut down travel expenses
- Improved communication — visual aspects, such as body language and object displays, promote better understanding of concepts
- Efficient meetings — video is engaging, increasing participants' attention span
- Keeping remote workers involved — stay in better touch with tele-workers and road warriors
- Remote training — update staff on the fly
- Timely customer support — troubleshoot issues without onsite visits

The larger the enterprise, the greater the financial benefit of the video conferencing solution. As a result, larger enterprises have adopted large-scale video conferencing solutions that require dedicated resources and therefore carry a big price tag. Smaller organizations, for the most part, have had to forego the benefits listed above, since they are hard-pressed to make the large investment required for dedicated video conferencing solutions. Those days are now over.
