# Xorcom TwinStar II - Software License

Product Name: Xorcom TwinStar II - Software License

Manufacturer: Xorcom

Model Number: LC0016

## Xorcom TwinStar II - Software License

The Xorcom TwinStar II is a new version of its award-winning high availability solution &ndash; TwinStar. The TwinStar II (as opposed to the original TwinStar solution) does not require an Atribank to operate, and therefore is particularly suited to pure VoIP environments. The product is (and will continue to be sold as) a software license. The new version supports plug-and-play functionality, in which DAHDI (Digium Asterisk Hardware Device Interface) devices, such as the Xorcom Atribank telephony interfaces, can be added or removed from a live Asterisk-based IP-PBX while it remains fully operational. In addition, the new version is especially suited to pure IP environments since, unlike the previous version, it does not require an Atribank to function.

### Xorcom TwinStar II Key Features

- Reduced single point of failure
- Suits pure IP environments, as well as hybrid (PSTN + VoIP)
- Supports Plug & Play
- Works with or without Atribank channel banks
- Ethernet cable connects primary & backup (supports greater distance between servers)
- Faster switchover to backup system
- For mixed systems (PRI + IP), the VoIP renews quickly after server switchover

TwinStar II provides full redundancy for a complete PBX system, including telephony interfaces (if present). A sophisticated automatic replication and detection mechanism detects server failure and switches all telephony to the backup server, keeping downtime to an absolute minimum. According to Eran Gal, CEO and Co-founder of Xorcom, &ldquo;Our TwinStar high availability solution has been a leader in our market, due in large part to the unique nature of our system architecture. With this new version we have moved forward with the technology, addressing the needs of pure IP environments and supporting configurations with greater distances between the telephony systems. At the same time we kept and even improved our support in hybrid (PSTN + VoIP) systems using Atribank units in TwinStar configurations.&rdquo;

**Price: £330.00**
