Manufacturer: -

Model Number: Y-CAMHIVE

Y-cam Hive

Y-cam Hive is compatible with all Y-cam cameras including the new SD range and Bullet. To Download the Y-cam Hive software please visit the following Y-cam page. What's The Buzz About Hive?

The Hive (Hosted Internet Video Enabler) service allows you to download updates to your camera which will automatically make it work with a range of different internet-hosted services. These services bring added features to your Y-cam, such as the ability to view your cameras footage from your own personal online account, easily setup alerts to send emails or SMS when motion is detected, or connect your cameras to social networks.

It's Not Complicated! It might sound difficult, but our Hive service does all the hard work for you – instantly setting up your camera to work with any of our affiliated services. All you have to do is Enable Hive from within your cameras setup, sign up with one of our service providers and then start using your camera.

How to get Hive The new Y-cam Hive feature is available now for existing users as a firmware upgrade – download it to your computer and upgrade your cameras firmware through the camera Settings. All brand new cameras will be shipped with the Hive feature from the start of June.

More Information & Services Visit the Hives dedicated website – <http://hive.y-cam.com> to view some more information on Hive and the services available to use.
